

FROM COSY to PANDA

*Paweł Moskal
Jagellonian University, Kraków*

***Polish-German Meeting on the New
International Accelerator Facility at Darmstadt
Warsaw, 24.11.2003***

Threshold works as a filter of quantum numbers

before reaction

parity conservation
Pauli principle
.....

$$\Rightarrow L = 1$$
$$\Rightarrow S = 1$$

\Rightarrow collision parameter $b \sim 0.2 \text{ fm}$

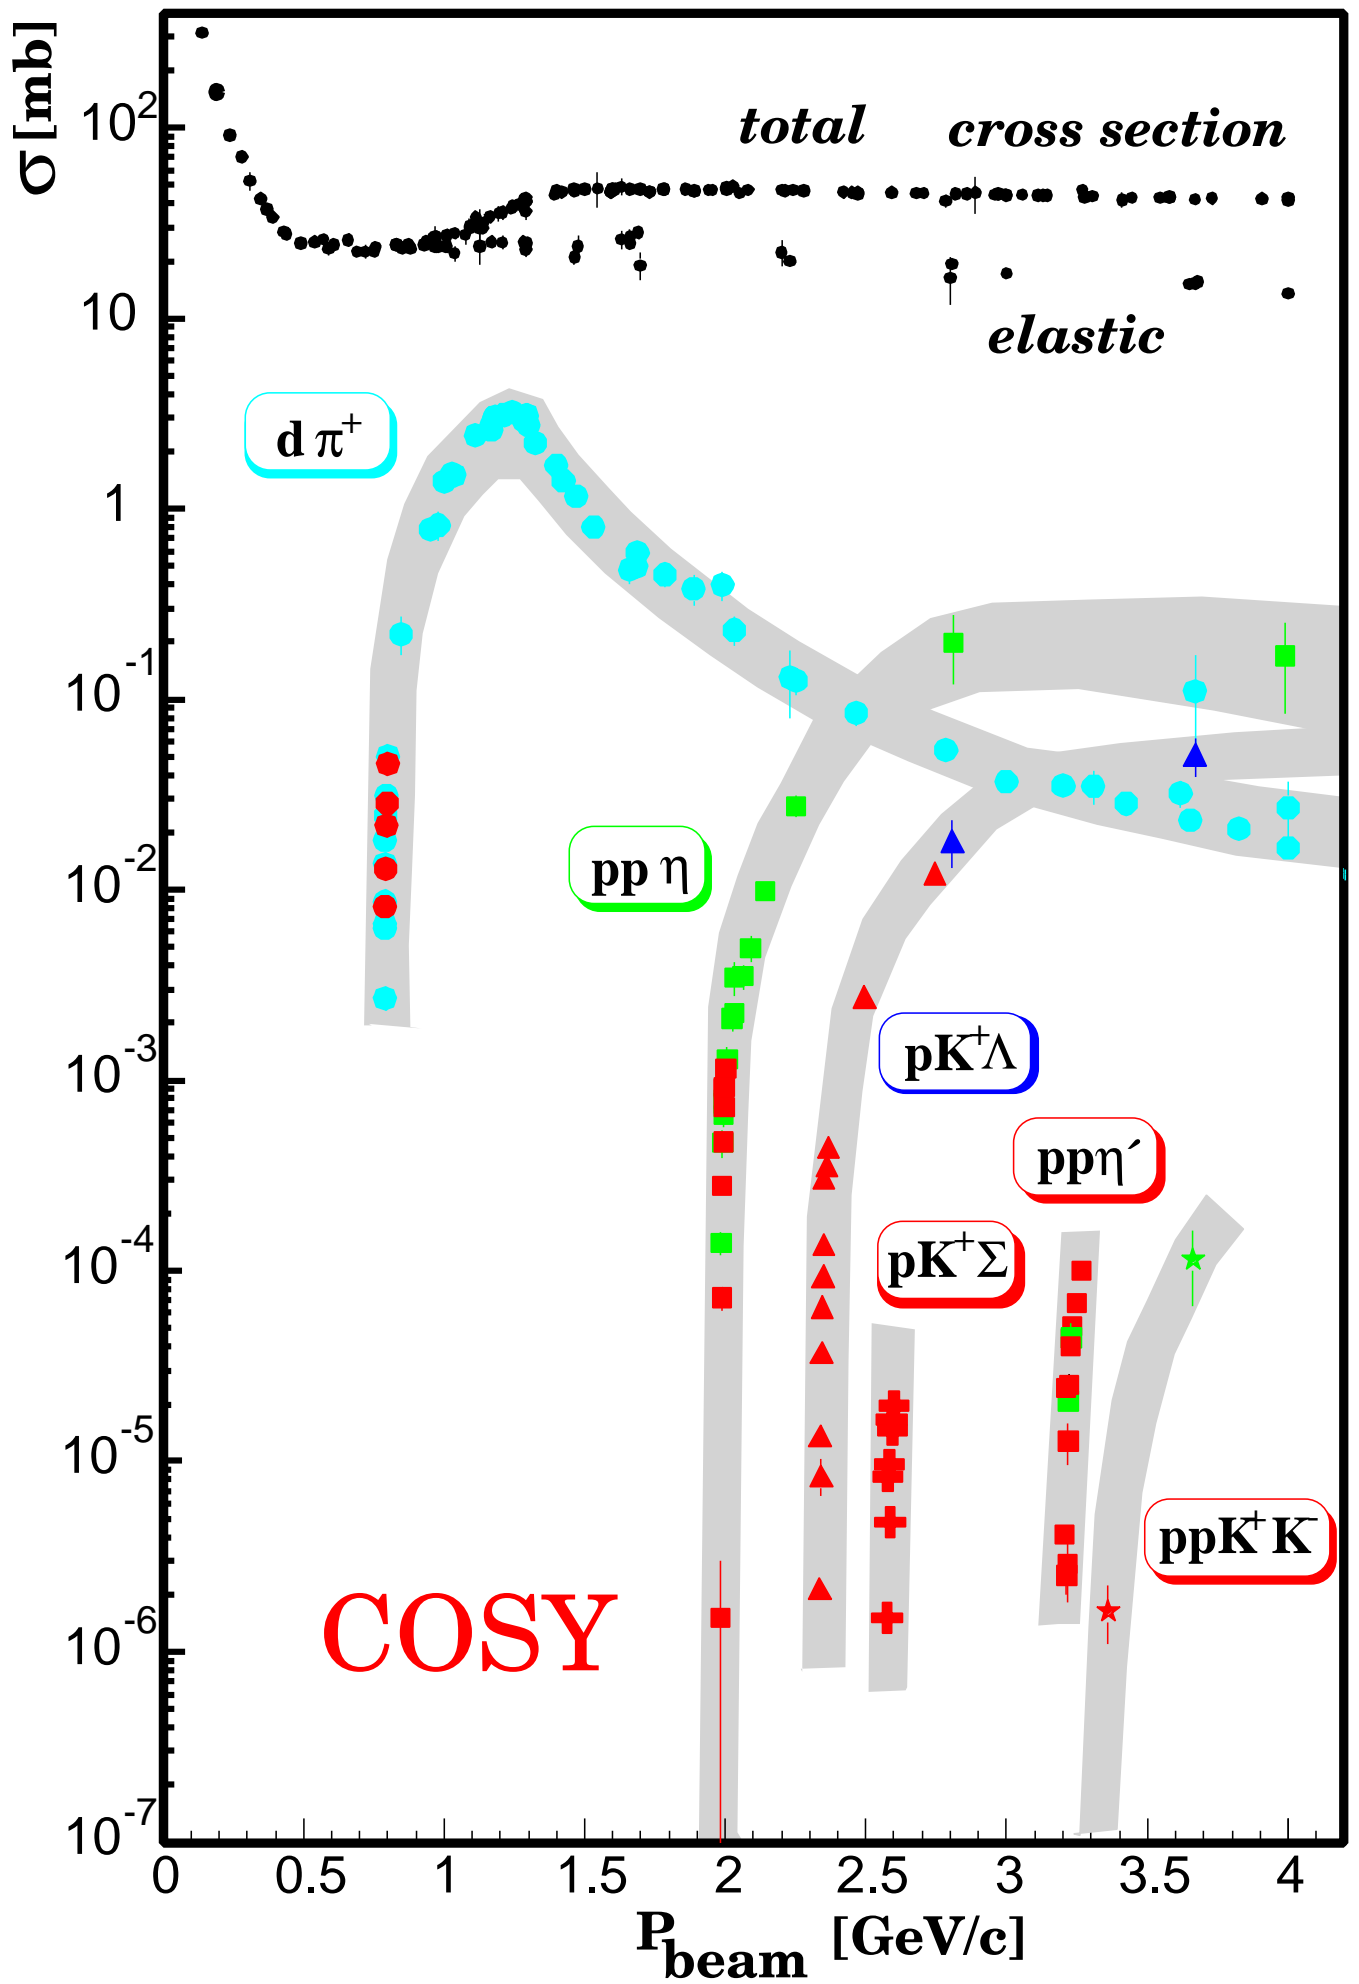

after reaction

at rest

$$L = 0, l = 0$$

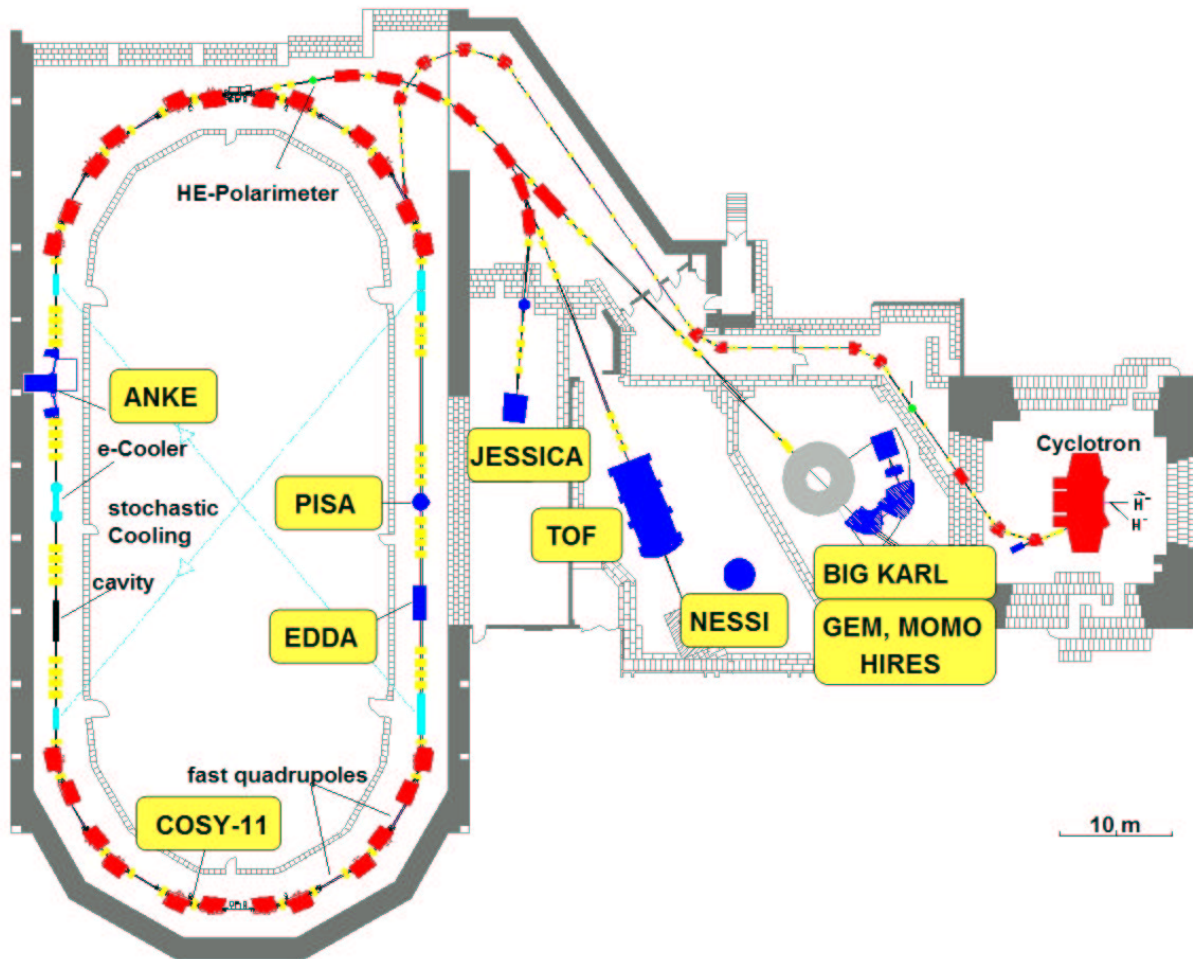

Total Cross Section for η and η' Production

Energy Dependence

COSY parameter:

circumference : 184 m

momentum : 300 – 3650 MeV/c

(energy : 45 – 2830 MeV)

→ $M_x(pp \rightarrow ppx) \sim 1.1 \text{ GeV}/c^2$

→ π^0, \dots, Φ

beam current : $5 \cdot 10^{10}$ protons

10^{11} deuterons

cooling : e^- , stochastic

$\varepsilon < 1 \pi \text{ mm mrad}$,

$\Delta p/p < 2 \cdot 10^{-4}$

external : stochastic
extraction

$p p \rightarrow p p \eta'$

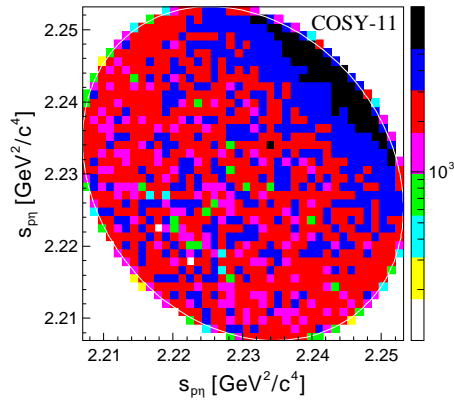

$\Gamma_{\eta'} \cong 0.2 \text{ MeV}$

pp η Final State

Dalitz Plot

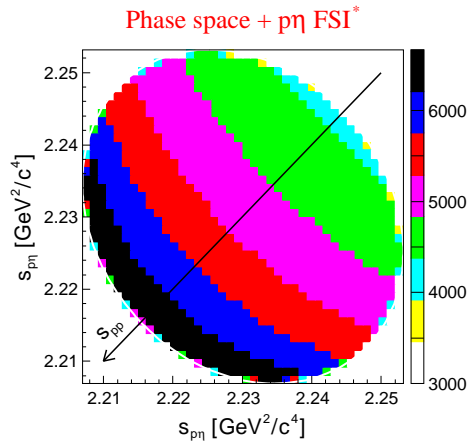

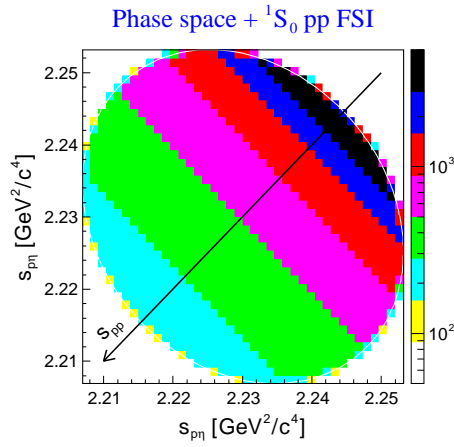

Experiment

$pp \rightarrow pp\eta$ $Q = 15.5\text{MeV}$

P.Moskal et al., nucl-ex/0307005,
submitted for publication

Monte Carlo Simulation

* $a_{p\eta} = 0.7\text{fm} + i 0.3\text{fm}$

More Selective Clues to
 $S_{11}(1535)$ excitation Higher Partial Waves
 Analysing Power for $\vec{p}p \rightarrow pp\eta$

▲ COSY-11 $Q = 40$ MeV
 P. Winter et al., Phys. Lett. B 544 (2002) 251

— $S_{11}(1535)$ excitation ρ exchange

— $S_{11}(1535)$ excitation π, η exchange
 + mesonic currents + nucleonic currents

Higher Partial Waves \Leftrightarrow Interference of Amplitudes

e.g. (PsPp) $\rightarrow A_y \propto \sin\theta_\eta \cos\phi_\eta$
 (SsSd) $\rightarrow A_y \propto \sin\theta_\eta \cos\theta_\eta \cos\phi_\eta$

(Published) Experimental Results:
 No discrimination between ρ and π, η exchange (yet)
 Interference Terms (PsPp), (PpPp), (SsSd) compatible with zero
 Experimental Programme: Energy Dependence of A_y^{\max}

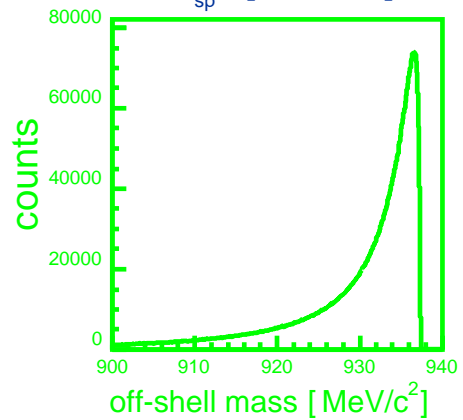

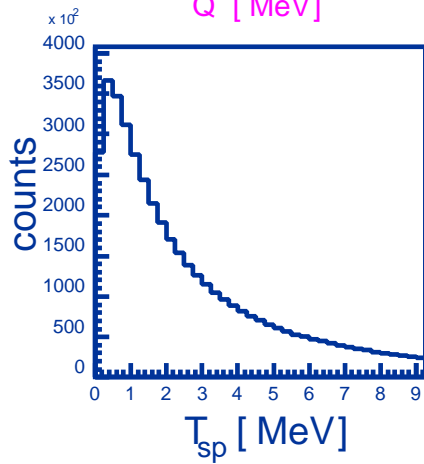

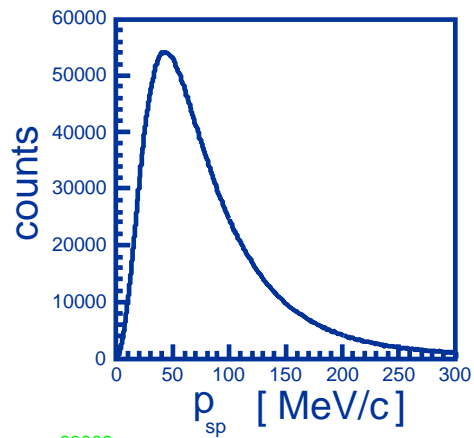

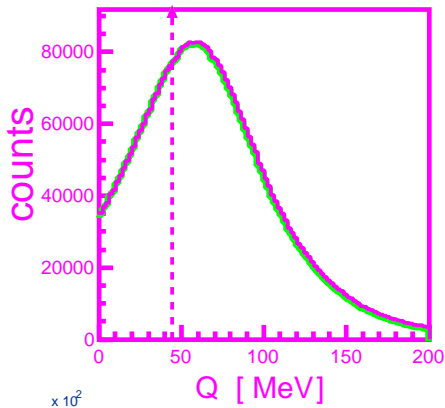

The momentum of both nucleons
inside a deuteron is measured
for each event !

beam proton

$P_{\text{beam}} \cong 3400 \text{ MeV/c}$

deuteron

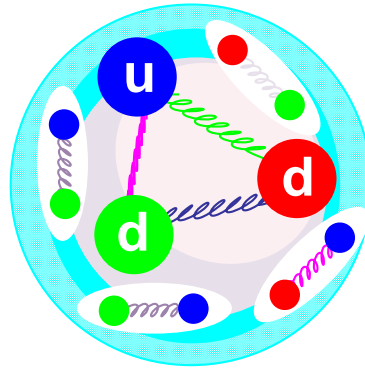

COSY-11 DETECTION SETUP

PROTON

NEUTRON

$$\eta' = \alpha |u\bar{u} + d\bar{d} + s\bar{s}\rangle + \beta |\text{gluons}\rangle$$

NUCLEON

$$R \equiv \frac{p n \rightarrow p n \eta'}{p p \rightarrow p p \eta'} = ?$$

$R = 1$ only gluons

$R \approx 6$ only quarks
